

Manitoba Retail Sales Tax - Commercial-Use Certification

To be completed if the commercial risks, perils and events that are being insured could occur both inside and outside of Manitoba. The allocation to Manitoba is to be determined on the basis that is most reasonable in the circumstances, such as:

- The insured value of the property in Manitoba as a percentage of the total value of the property insured in all jurisdictions;
- An allocation by revenue per province for business interruption insurance;
- For goods in transit, the percentage of travel in Manitoba in comparison with the total amount travelled.

For example, if cargo insurance is purchased on goods in transit and 85% of the travel occurs in Manitoba and 15% occurs outside of the province, 85% of the premiums paid in regards to the cargo insurance are taxable.

Policy Number:	
Insured Name:	

Classification:	Manitoba use percentage:
Property	
Business Interruption	
Crime	
Liability	
Glass	
Equipment breakdown	

I/We hereby certify that the above percentages are appropriate for Manitoba RST purposes.

I/We also understand that should my/our circumstances change as described above that I/we will notify the Insurer immediately of the change.
